

2c Multi-geometry alignment (MG)

Scale-free ordinal structure

Convert each geometry's evidence to within-set ordinal coordinates

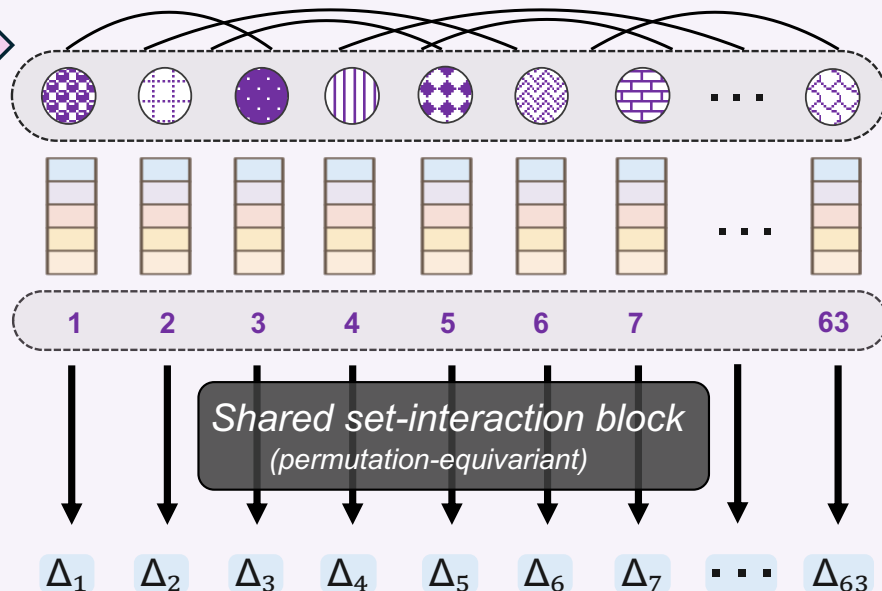

Ordinal ladder (rank 1 → 63)

Ordinal channel (scale-free within-set order)

Compare order, not incompatible raw scales.

Permutation-equivariant set interaction with bounded score correction

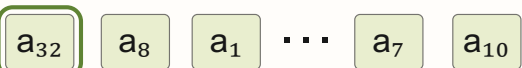

4 Decision-aligned candidate ordering

Native predictive order (example)

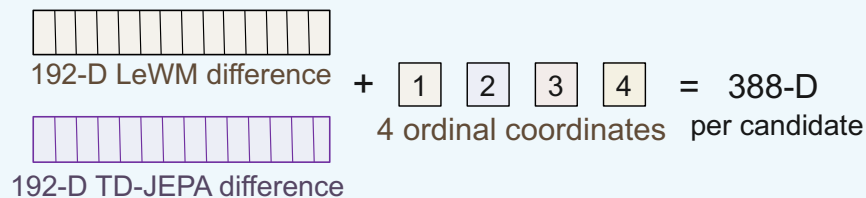

Decision-aligned order (output)

Selected action (top-1)

Per-candidate descriptor

3

Calibrated Composition

(63 × 5 × 192)

Admit the plastic proposal only when its advantage is reliable.
